# Biogas Plant Inventory

## Renewables-based electricity generation in Germany 2013

Total: 152.4 billion kilowatt hours

\* (incl. Biomethane); BMWi based on Working Group on Renewable Energy-Statistics (AGEE-Stat); as at January 2015; all figures provisional

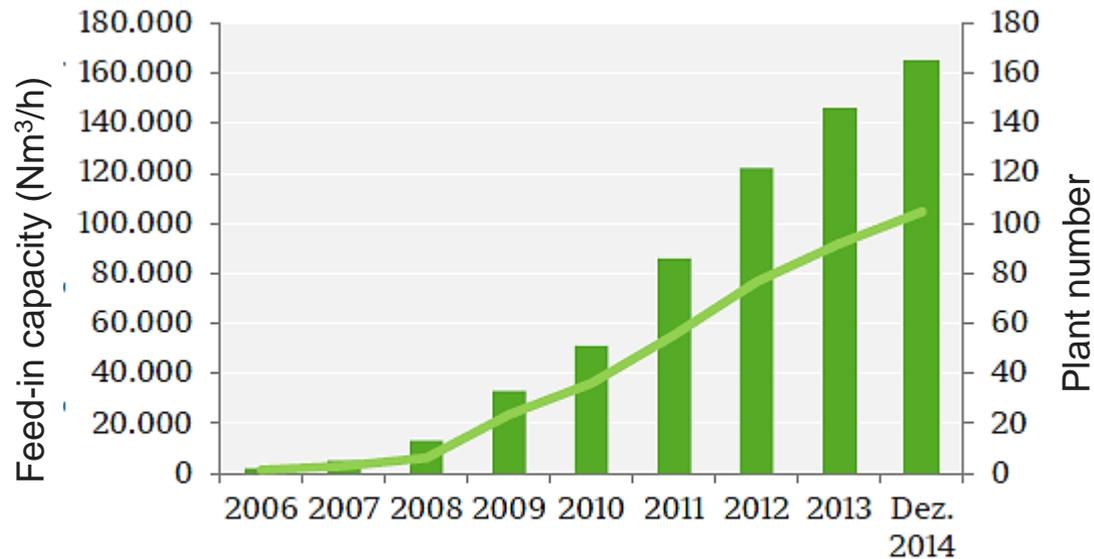

# Biogas Plant Inventory

Substrate Plant type	Number of plants	Energy Production <sup>1)</sup> (GWh/year)	
		Electricity	Heat
Sewage sludge	1400	1310	1740
Biowaste	180	850	360
Agriculture	8005*	25120	10550
Industrial	80	450	190
Landfills	400	540	90
<b>Total</b>	<b>10,020</b>	<b>28,270</b>	<b>12,930</b>

<sup>1)</sup> Fuel not included

Source: Federal Ministry for the Environment, Nature Conservation, Building and Nuclear Safety (2013); DWA (2014), German Biogas Association; (\* trend 2015)

# Biogas Upgrading current situation

■ Plant number   
 — Feed-in capacity (Nm<sup>3</sup>/h) = 0.95 billion m<sup>3</sup>/year

Dec. 2014                      165                                      104 660

# Biogas Upgrading plants trend

Source:

# Biogas plant trend

Source: German Biogas Association (2014, adapted)

# Biogas potential 2020 (Germany)

2014 Natural gas consumption 70.9 billion cubic metres

Substrate	Potential TWh/a <sup>1)</sup>
Industrial waste	0.5
Agricultural residues	0.5
Municipal waste	1.5-3.7
Sewage sludge	1
Animal waste	10
Biogas crops	22.9 - 45.8
Total	36.4 - 61.5

<sup>1)</sup> equal to billion cubic meters natural gas

Source: Scholwin, 2014, acting on behalf of the  
German Federal Ministry of Economic Affairs and Energy

# Biogas Utilisation

Utilization type	GWh	%
Electricity	28270	68
Heat	12930	31
Vehicle fuel	350	1
Flare	-	-

Source: Federal Ministry for the Environment, Nature Conservation, Building and Nuclear Safety, 2013

CNG as a vehicle fuel: Total number 920 filling station, thereof

- In 2013 about **170 filling stations** with **100% biomethane**
- 350 GWh biomethane was sold, in concrete terms →
- **20% of 95,000** registered **gas vehicles** were filled up with **biomethane**

Source: Erdgas Mobil GmbH, 2013

# Digestate hadling

Parameter	Agriculture	Biowaste
Mass of digestate (Mg a <sup>-1</sup> )	80 * 10 <sup>6</sup>	2.4 * 10 <sup>6</sup>
Total solid concentration (% fresh mass)	7,0	6,0

Source:  **Fraunhofer**  
UMSICHT

Based on data from German Biogas Association, 2012  
and Wizenhausen Institut, 2011

## Agriculture

- Digestate is used as organic fertilizer,
- Solid liquid separation most applied treatment technology (75%),
- 7% use digestate drying (operator survey of DBFZ, 2013)

## Biowaste

- solid/liquid separation
- Composting of solids, liquid organic fertilizer

# Financial Support Systems

EEG: 21.07.2014

Substrate Category	Feed-in tariffs € cent/kWh	Electric power Up to
Biomass Ordinance <sup>1)</sup>	13.66 11.78 10.55 5.85	150 kW 500 kW 5 MW 20 MW
Biowaste <sup>2)</sup>	15.26 13.38	500 kW 20 MW
Animal manure <sup>3)</sup>	23.73	75 kW

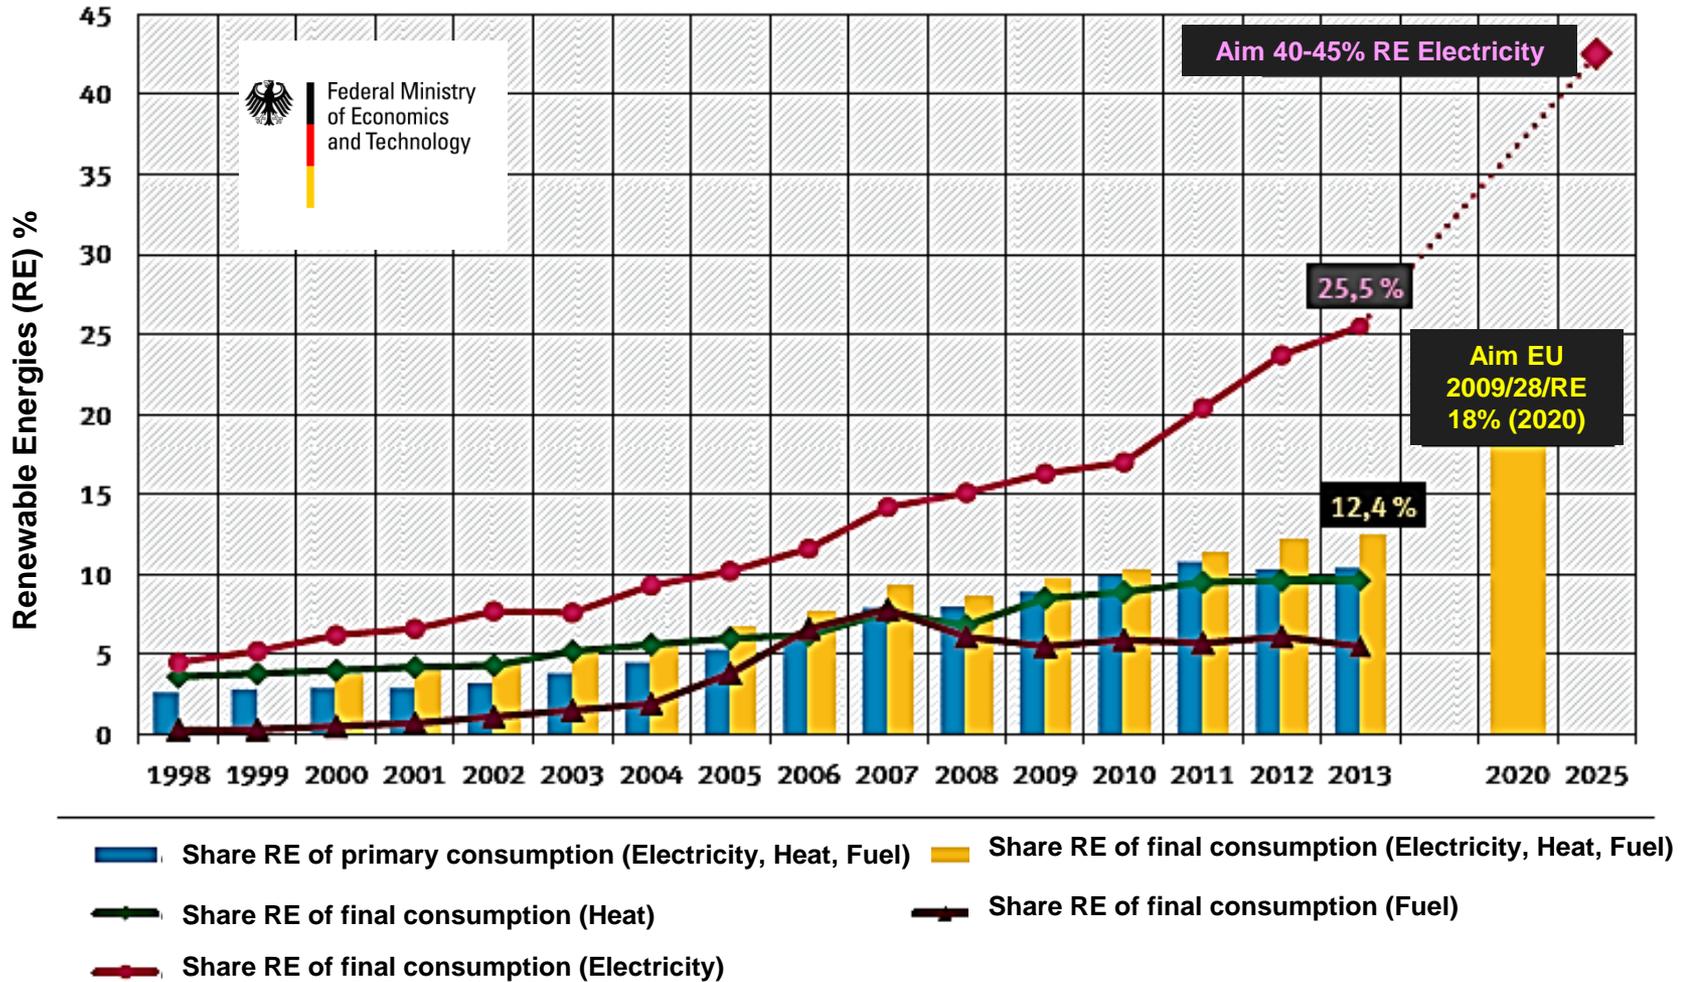

1) dated 21 June, 2001, amendment article 12, dated 21 July, 2014

2) 90% by weight biodegradable waste (waste entry 20 02 01), mixed municipal waste (waste entry 20 03 01) or market waste (waste entry 20 03 02)

3) at least 80% by weight, poultry manure excluded

# National Strategy

- Annual growth of biomass including biogas is limited to a maximum of 100 MW compared to 2500 MW for onshore wind and solar power
- From 2016 obligation to direct marketing for new plants more than 100 kWel

# Research project "Energy Shift"

Testing of slurry based biogas plant, start up Sept. 2014

- Development of a **75 KW biogas plant** based on slurry and farmyard manure
- **Regional consumption** of electricity and heat
- Common treatment of manure from nearby farms and storage of biogas
- Generation of electricity at intervals of four hours each morning and evening for **demand based energy supply**
- Excess **thermal energy** is fed into the heat network of existing wood chip heating system
- **Supply** of the Almesbacher **buildings with heat**
- Collection of legal and organizational experience

Lehr-, Versuchs- und Fachzentrum  
Almesbach

# Research project "BIOGAS-MARKER"

## Bioindicators of biogas fermentation

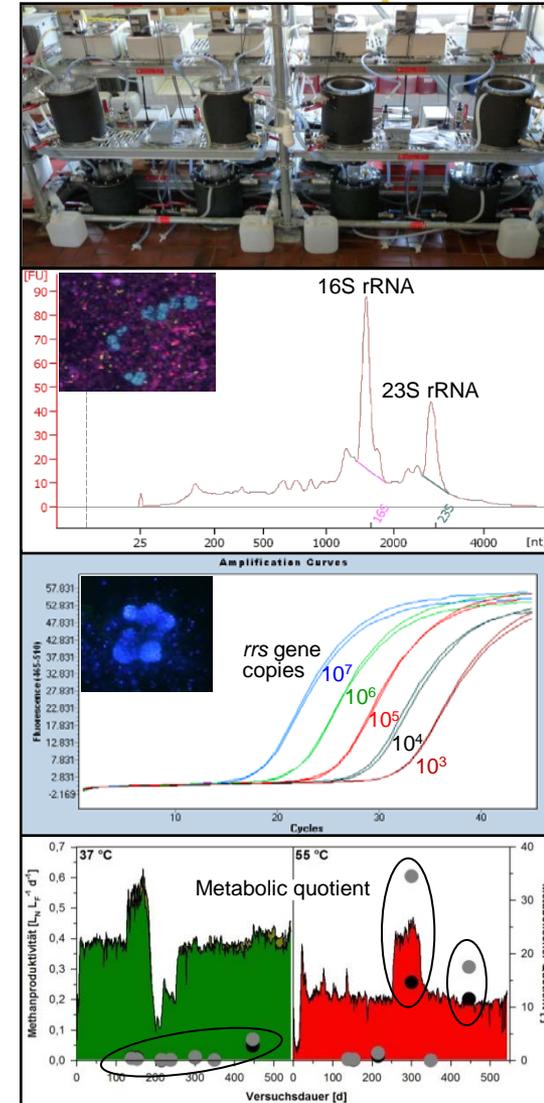

- **Aim:** Development of **molecular markers** and marker-based quantitative PCR assays for the monitoring of process-relevant microorganisms **as early warning system** for process disturbances
- **Tasks:** Meso- and thermophilic single- and two-staged model fermentations utilizing grass silage; standardisation of DNA- and RNA- isolation protocols; microbial metatranscriptome profiling; marker development and validation
- **Partners:** Leibniz-Institut für Agrartechnik Potsdam-Bornim e.V.; Bayerische Landesanstalt für Landwirtschaft; Universität Bielefeld; Technische Universität München; Beuth Hochschule für Technik Berlin

- **Duration:** 1.4.13 - 31.3.16

- **Reading:** Lebuhn et al. (2014): Towards molecular biomarkers for biogas production from lignocellulose-rich substrates. Anaerobe 29: 10-21; dx.doi.org /10.1016/ j.anaerobe. 2014.04.006
